

# RAYANE TERKI

Full Stack Developer

rayaneterki55@gmail.com    +213 660 320 043    github.com/trrayane

## ABOUT ME

Final year Computer Science student at USTHB and full stack developer. I mostly build web apps and APIs with Node.js, Python and React, and I like adding AI features and working on security. I also play CTFs in my free time.

## TECHNICAL SKILLS

|               |                                                                 |
|---------------|-----------------------------------------------------------------|
| Languages     | JavaScript, TypeScript, Python, PHP, C, C++                     |
| Frontend      | React, Next.js, React Native, Tailwind CSS, Vite                |
| Backend       | Node.js, NestJS, Express, FastAPI, Django                       |
| Databases     | PostgreSQL, MongoDB, MySQL                                      |
| DevOps        | Docker, Nginx, GitHub Actions, AWS, Linux, Git                  |
| AI & Security | Gemini API, LangChain, JWT, OAuth2, Burp Suite, Wireshark, Kali |

## PROJECTS

|                                                                                                                                        |                                    |
|----------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| Healy                                                                                                                                  | React, Python, FastAPI, PostgreSQL |
| An AI health platform that tracks symptoms and gives suggestions, with a patient dashboard, appointment booking and encrypted records. |                                    |
| SummarAI                                                                                                                               | Python, FastAPI, LangChain, Gemini |
| A web app that summarises PDFs, documents and URLs with LLMs. It shows the summary as it is generated and keeps a history.             |                                    |
| github.com/trrayane/SummarAI                                                                                                           |                                    |
| Rayane Labs                                                                                                                            | React, Express, Supabase, Docker   |
| An online store for PC peripherals with search and filters, JWT login, an admin panel and cash on delivery across the 58 wilayas.      |                                    |
| github.com/trrayane/Rayane-ecomm                                                                                                       |                                    |
| Ecommerce Mobile App                                                                                                                   | React Native, Expo                 |
| A mobile shopping app with a product catalogue, cart, checkout and order tracking.                                                     |                                    |
| Portfolio                                                                                                                              | React, Vite, Tailwind              |
| My personal site with light and dark mode and a working contact form. rayane-portfolio-eight.vercel.app                                |                                    |
| Task Manager                                                                                                                           | Next.js, Socket.io, MongoDB        |
| A team task manager with realtime Kanban boards, live updates and role based access.                                                   |                                    |
| 2048 Game                                                                                                                              | C, SDL2                            |
| The 2048 puzzle game built from scratch in C with SDL2 for the graphics and input.                                                     |                                    |
| Assembly Calculator                                                                                                                    | x86 Assembly                       |
| A working calculator written in x86 Assembly, handling the core arithmetic operations.                                                 |                                    |

## CTF & HACKATHONS

I play CTFs in web, reverse engineering, crypto and forensics. I have taken part in **MCTF**, **GHCTF**, **EXHA** and other Algerian and online CTFs and hackathons.

## EDUCATION & LANGUAGES

### Licence in Computer Science (L3, final year)

USTHB, Algiers

### Languages

Arabic, English, French
